

Mersive Solstice with 22Miles Digital Signage delivers a powerful collaboration experience that promotes communication and user choice in any workplace or campus. Solstice offers wireless multi-participant content collaboration and seamlessly connects web conferences to the room technology, whether it's in a huddle space, conference room, or transitional area.

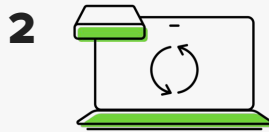

And when displays are not in use for collaboration, they can display customizable digital signage including interactive wayfinding, real-time space availability, and fully automated company dashboards for a more unified and immersive experience in any meeting or learning space.

Turning your Solstice Pod into a digital signage media player is as simple as

Creating Digital Signage
in 22Miles

Adding the 22Miles Digital
Signage URL to Solstice

Enjoying 22Miles Digital Signage
on Solstice Displays

System Requirements

- Solstice Pod(s) with Enterprise Edition Licenses on 4.0 or later
- Solstice Cloud Management
- 22Miles Web Editor or Publisher Pro
- Internet access through your firewall for:
 - Google Chrome web browsers
 - Open network ports 80 and 443
- Display monitor(s) connected to each Pod

How to Set Up 22MILES Digital Signage on a Solstice Display

1. Log in to Solstice Cloud at cloud.mersive.com.
2. Go to **Manage > Pods** and click the name of the Pod you want to display 22Miles Digital Signage content on.
3. Scroll down and click the down arrow to expand the **Digital Signage** settings.
4. Check **Enable Digital Signage** and select a display format.
5. In the **Source URL** field, enter the URL for the 22Miles digital signage device, which should look similar to the following: `http://h5.22miles.com/wl/[shortcode from 22Miles]`
6. Click **Save as Unassigned**, or you can **Save as New Template** to create a digital signage template you can apply to multiple Pods. Any Pod assigned this digital signage template will display the content assigned to that 22Miles device URL.
