Solstice Overview

Solstice is Mersive's award-winning collaboration software, installed on a dedicated hardware platform to deliver turnkey wireless content sharing and video conferencing tools. Plug any HDMI room display in to the Solstice Pod, and connect it to the network(s) that participants will use to connect and share to the display. Users on the network then follow on-screen directions to connect wirelessly to Solstice and share content. Meeting hosts can connect Solstice to meetings using their preferred video conferencing service.

Key Terms

- **Solstice display**: Any flat panel or projector display connected via HDMI video cable to a Solstice Pod or Solstice Windows Display Software instance.

- **User device**: Devices brought by users that can connect to a Solstice display through the Mersive Solstice app (Windows, macOS, iOS) or app-free methods, including from a web browser.

- **Posts**: Individual pieces of information shared to a Solstice display, including desktop, application window, and multimedia shares.
Solstice Display Overview

A Solstice display is the content sharing space created by the Solstice Pod or Solstice Windows Display Software that shows on the flat panel monitor or projector display. Users can connect and share content wirelessly to the Solstice display with laptop and mobile devices in a number of ways. The welcome screen provides information about the Solstice Pod or Windows Display when not in use for a Solstice-enabled content sharing session or video conference or configured to display digital signage.

Welcome Screen

The welcome screen appears when Solstice display is not currently being used for a collaboration session or digital signage display. It shows the Solstice display name, a screen key (if enabled), network information, user connection instructions, upcoming meetings on the integrated room calendar, and the Solstice display menu.

Solstice Display Menu

The Solstice display menu lets in-room users manually change various Solstice display settings, such as bringing the display out of moderated mode, locking the display, or disconnecting all users. To access the Solstice display menu when Solstice is running, click the Solstice icon in the bottom right corner of the display (using a USB mouse or via a supported touch screen).
Display Menu Options

- **Access Control**: Manually removes the display from moderator mode in the case that the user moderating the meeting left the room without disconnecting from the display. Note that the display is put into moderator mode in the Mersive Solstice app’s Moderate tab. If moderator mode is disabled for the display, the Moderate tab and option to moderate the meeting will not appear.

- **Lock**: Disables access to the display by any new users for the remainder of the session. Only users already connected to the display can share media.

- **Disconnect All Users**: Disconnects all users from the session and removes all shared content.

- **System > Configure**: Provides access to the local configuration panel. This is used by admins to configure settings such as the display’s appearance and network settings.
Share Content Using the Solstice Web App (Beta)

Browser-based sharing to Solstice is being completely redesigned into the Solstice web app. With the release of Solstice 6, meeting participants can now share a piece of content from their device to a Solstice display from a browser on their laptop without needing to download and install an app. This allows new users, including guests, to walk into a meeting, open their browser, and quickly share content to the display connected to a Solstice Pod.

The Solstice web app is being released as a Beta, so users may notice some bugs that are still being worked out. As a web app, improvements can and will be released more frequently than a traditional app, so keep visiting to see the latest functionality.

More content sharing and layout controls are available in the Mersive Solstice app for Windows, macOS, and iOS devices. Installing the app on Windows and macOS also allows a meeting host to use Solstice Conferencing to share the Solstice display and select room devices connected to the Solstice Pod for video and audio in their video conference.

Users may also choose one of a variety of other app-free sharing options supported by Solstice to share to the Solstice display.

Requirements

- Supported web browser running on a laptop (see table below); mobile devices are not supported
- Web Sharing enabled for the Solstice Pod running Solstice 6 and higher
- New default security certificate (upgrading to Solstice 6 will overwrite old default certificate)

Hosting and Security

The Solstice web app resides online in Solstice Cloud. This means updates can be released to the web app much more frequently than the Mersive Solstice desktop and mobile apps. However, sensitive user information and shared content is never sent to Solstice Cloud. Once a user enters a Solstice Pod to connect to, all information is sent over a secure point-to-point HTTPS connection between the user's laptop and the selected Pod.

Browser Support by Operating System

See the compatibility chart below to select the best web browser for sharing content from a laptop to Solstice using the new Solstice web app. Note that the ability to share audio with different kinds of content varies by browser and operating system.
<table>
<thead>
<tr>

Informational alerts appear in the lower right corner of the Solstice web app when a user may encounter limitations based on their operating system and web browser.

**Connect to Solstice with the Solstice Web App**

1. Connect your laptop to the network listed on the Solstice display.

   ![Tip](Image)
   If multiple URLs are listed, use the one that corresponds to the network you’re connected to.

2. Open a web browser (Mersive recommends Google Chrome) and go to [https://share.mersive.com](https://share.mersive.com).

   ![File](Image)
   If your browser can’t connect to the Solstice display, your IT administrator may need to enable **Web Sharing** for the Solstice Pod you are connecting to.
3. Enter the IP address of the Solstice Pod shown on the Solstice display. Then click **Connect**.

4. If asked, enter the screen key shown on the Solstice display.

   To connect to a Solstice Pod with a custom Pod server certificate installed, instead enter the Pod's FQDN (fully qualified domain name). Mersive recommends using the [Mersive Solstice app](https://solstice.mersive.com) to connect to Pods with custom certificates. Contact the Solstice administrator for your organization for assistance.
5. Enter your name as you would like it to appear when sharing content, then click **Connect**.
Select **Remember my name** to save the name entered for future sharing sessions. A sharing label will be randomly assigned if this field is blank.

If after a long delay between going to share.mersive.com and clicking **Connect**, content fails to appear on the Solstice Pod, the process may have timed out. Try reloading share.mersive.com and connecting again.

6. Click the **Share** button to access sharing options available on your OS and browser.

7. Select the sharing option you wish to use. For example, share a browser tab, an application window, or your entire screen. Options may vary by browser and operating system.

8. Select **Share audio** if the content you are sharing has audio you want played from the Solstice display. Audio sharing availability can vary by browser, operating system, and sharing type.

   **Remember to mute your laptop audio when sharing audio content to the Solstice display to prevent an echo effect.**

9. Click to **Share** the selected content to the Solstice display. The browser window will show a reduced version of what is being shared to Solstice. Minimize this window to interact directly with shared application window or entire screen content.
10. When you are done sharing, end the sharing session and disconnect from the Solstice display in one of the following ways:

- Click **Disconnect** in the browser window that shows the reduced version of the content being shared.
- Click **Stop Sharing** in the bar that appears at the bottom of the screen (Window or Entire Screen sharing).
- To end a Browser Tab share, click **Stop Sharing** in the bar that appears at the top of the sharing preview tab. Or simply close the shared browser tab.

Navigating back to the Solstice web app start page does not automatically end content sharing and disconnect from the Solstice display. Be sure to disconnect in one of the ways described above before trying to reconnect to Solstice and share content again.

If you are on macOS and are having trouble sharing from your browser, you may need to enable permissions within your system’s privacy settings for the browser to utilize screen recording.
Install and Configure the Mersive Solstice App

Meeting and collaboration session participants looking for advanced content sharing and layout features may install the Mersive Solstice app on Windows, macOS, or iOS devices. Adding the Solstice Conference drivers to the Mersive Solstice app on Windows and macOS allows a meeting host to share the Solstice display and select Solstice-connected room devices for video and audio in their video conference.

The Mersive Solstice app and Solstice Conference drivers may always be installed by downloading the appropriate app from mersive.com/download/.

Administrator privileges are required to install the Mersive Solstice user app and Solstice Conference drivers.
**Supported Operating Systems**

The Mersive Solstice app is supported on laptops, tablets, and mobile devices running the following operating systems. Operating systems marked with an asterisk (*) support Room Camera + Mic video conference connection functionality in recent versions of the Mersive Solstice app. Learn more about using Solstice with your video conference.

- Windows 8, 10*, 11*
- Windows Server 2016, 2019, 2022
- macOS Big Sur*, Monterey*, Ventura
  - MacOS Ventura is supported for Solstice content sharing with the Mersive Solstice app, and is recommended for sharing PowerPoint presentations.
  - Connecting room cameras and mics to video conferences in version 6 of the Mersive Solstice app requires macOS Monterey 12.3 or higher.
  - Due to a compatibility issue with virtual cameras on Mac laptops with Intel processors, the Solstice app Room Camera + Mic functionality for video conferences is not yet supported on macOS Ventura.
- iOS versions 15, 16

**Other Requirements**

The version of your Mersive Solstice app in relation to the version of Solstice running on the Solstice display you are connecting to can affect your experience. There are different compatibility requirements depending on how you intend to use Solstice:

- The device with the Mersive Solstice app installed must be connected to the same network as the Solstice display to connect and share content.
- For content sharing, control, and markup capabilities, newer versions of the Solstice app are supported when used with a Solstice Pod within three (3) release versions of the app. For example, a user with a 5.5.1 Solstice app will be able to share content to Solstice Pods running software versions 5.5, 5.4, or 5.3.4, as well as use markup tools and control sharing options.
- To use Solstice to connect to a video conference, the version of the Mersive Solstice app and Solstice Conference drivers should be the same version as the software running on the Solstice Pod. Some versions of the Mersive Solstice app may require the versions to match exactly to connect Solstice resources to a video conference.
**Download and Install the Mersive Solstice App**

Follow the steps below to download and install the Mersive Solstice app, with optional functionality to connect Solstice to video conferences (Windows and macOS versions).

1. Go to [mersive.com/download/](https://mersive.com/download/).
2. Download the installation file appropriate for your Windows or macOS laptop. Or follow the appropriate app store link for your mobile device.
3. On a Windows laptop, download the Mersive Solstice app installer (e.g., SolsticeClientWin-6.0.msi).
   a. When the download is complete, run the file to install the Mersive Solstice app. Once installed, the Mersive Solstice app will open automatically.

   ![Starting in Solstice 6, Windows administrator privileges are always needed to install the Mersive Solstice app and Mersive Solstice Conference drivers (see below).](image)

   ![For Windows versions, write access to the settings directory C:\ProgramData\Mersive\ALLUSERS\Solstice\Client\ is needed to save user settings.](image)

   b. To add the ability to use devices connected to Solstice in a video conference, navigate to the Room Camera + Mic panel and click **Install drivers**.
   c. Walk through the InstallShield wizard to install Mersive Solstice Conference drivers.

4. On a Mac laptop:
   a. Download the Mersive Solstice app installer (e.g., SolsticeClient-6.0.dmg).
   b. When the download is complete, run the file to install the Mersive Solstice app. Once installed, the Mersive Solstice app will open automatically.
   c. To add the ability to use devices connected to Solstice in a video conference, navigate to the Room Camera + Mic panel and click **Install drivers**.
   d. Walk through the steps to install Mersive Solstice Conference drivers.

5. On iOS mobile devices, follow the app store link to download and install the latest version of the Mersive Solstice mobile app.
Mobile devices cannot host Solstice-enhanced video conferences. Solstice wireless content sharing and Solstice Ink annotation are available in the Mersive Solstice mobile app.

**Change Your Mersive Solstice App Settings**

Change how your device interacts with Solstice by opening the Mersive Solstice app and clicking Settings in the left navbar. Complete settings options in the Windows and macOS apps are described below; iOS and Android apps contain more limited settings. Changes to app settings are immediately saved.

**General**

- **Your Display Name:** How your name will appear in the collaboration session.
- **Notifications:** Set which notifications you would like to receive: **None**, **Critical**, or **All** notifications.

Notification settings also control notifications for Solstice Conference drivers. Selecting **None** will turn off performance and compatibility notifications related to using Solstice resources for a video conference.

- **Solstice Discovery Service Address:** If your organization has implemented Solstice Discovery Service (SDS), the SDS IP address should be entered here. This is one of the ways that Solstice displays on your organization's network appear in your list of available displays. For more information on the SDS address for your organization, contact your IT administrator.

**Control**

- **Quick Share Desktop:** If enabled, Solstice will automatically share your desktop to the Solstice display after connecting. Starting in Solstice 5.5.2, this setting controls automatic desktop sharing both when initially connecting to a Solstice display and when connecting to room devices for Solstice-enabled video conferencing.
- **Auto share audio:** If enabled, audio will automatically be streamed to the Solstice display with Desktop and App Window shares.
- **Hide on desktop share:** If enabled, the Solstice app window will be automatically hidden when you share your desktop.
- **Extended Presentation Mode:** If enabled, PowerPoint slideshows shared in the Solstice app will show only the presentation slides on the Solstice display. Presenters should enable Presenter View in PowerPoint to view their speaker notes and access other presenter tools on their laptop.
Conference

The Conference settings appears after the Mersive Solstice Conference drivers have been installed (see Room Camera + Mic tab).

- **Calendar integration**: You can integrate your personal Microsoft 365 calendar with your Mersive Solstice app, allowing Solstice to detect and auto-launch scheduled video conferences on your calendar when you connect to a Solstice display. This is supported for Windows and macOS laptops only. See below to learn how to [integrate your calendar](#).

- **Share Pod Display**: If enabled, this setting allows you to share the Solstice display's collaboration space to your video conference. In your video conference app, the Solstice display will appear as a virtual display (usually Screen 2 or Monitor 2) that can be shared with the meeting. Disabling this feature may improve performance on some devices. This feature is disabled by default in new installations of the app.

- **Performance Optimization**: This setting appears only on Windows laptops detected to be lower-end for video conference performance with Solstice. When enabled, the app will change the priority of the Mersive Solstice Conference process from Normal to High to improve performance when there is enough battery (at least 25% when unplugged, or 5% when plugged in). [See more details](#).

### Integrate Your Personal Microsoft 365 Calendar

When a meeting host integrates their Microsoft 365 calendar with the Mersive Solstice app, Solstice can quickly launch video conferences scheduled on their personal calendar after connecting to a Solstice display. Calendar integration is available on Windows and macOS only. Mersive Solstice Conference drivers must be installed with the Mersive Solstice app (see Room Camera + Mic section of app) to use this capability.

When integrating your calendar, you will be prompted to sign into your Microsoft 365 account using the secure Microsoft Graph API OAuth2 authorization flow. This grants the Mersive Solstice app read-only access to your calendar so it can recognize video conference information (URL, meeting ID, passcode, etc.) in the body of upcoming meetings and facilitate faster starts for scheduled video conferences.

1. In the Mersive Solstice app, navigate to **Settings > Conference**.
2. In the **Calendar integration** section, click **Sign in with Microsoft**. Your web browser will open, and you will be prompted to log in to your Microsoft 365 account.
3. Complete your Microsoft 365 login process. If successful, the browser will display a "Success" message.
4. Close the browser and return to your Mersive Solstice app.

If you are unable to save your Microsoft 365 credentials and are prompted to re-enter them each time you launch the Solstice app, the Credential Manager service in Windows may have been disabled by your IT team.

5. If you wish to disconnect your Microsoft 365 calendar at any time, go back to Settings > Conference > Calendar integration and click Sign out.

If your Microsoft 365 calendar is authenticated with Azure AD, your IT administrator may need to grant admin consent for the Mersive Solstice app in the Azure Active Directory app registrations.

A Solstice administrator can set up an integrated room calendar for a Solstice-enabled workspace, which enables the Solstice display to show and interact with meetings scheduled for the space. See details at Solstice Cloud: Calendar Template.
Share Content Using the Mersive Solstice App

Solstice improves meeting productivity and engagement with multi-participant content sharing, control, and markup. With the Mersive Solstice app installed on a laptop, tablet, or mobile device, users can share and control content on the display connected to a Solstice Pod.

Users can also use the redesigned Solstice web app or one of the other app-free sharing options supported by Solstice to share to the Solstice display.

How to Connect to a Solstice Display

Ensure you are connected to a network listed on the display’s Welcome Screen, then connect to the Solstice display to share content:

1. Open the Mersive Solstice app. A list of Solstice displays you have previously connected to or that are available via display discovery (if enabled for your Solstice deployment) will appear.

2. Click the name of a Solstice display to connect.

3. To find a specific display in the list:
   - Search by name in the search bar.
   - Click Tags to filter the list of displays by assigned tags (Enterprise Edition only).

4. If prompted, enter the screen key that appears on the display.

5. For deployments that use Solstice Discovery Service (SDS), you may enter the 4-digit screen key on the Solstice display in the search bar at the top of the app window to connect in one step. The URL that appears on the Solstice display can always be entered in the search bar to start a connection.

6. By default, the you will join the collaboration session with full media posting and control rights.
How to Share Content Using the Mersive Solstice App on a Laptop

In the Share tab of the Mersive Solstice desktop app, you can wirelessly share an unlimited amount of content to the Solstice display using any of the following options. Note that the content shared to Solstice will never leave your device, only pixels will be streamed to the display.

- **Desktop**: Share a real-time view of your desktop mirrored to the display. The entire desktop, including any open application windows, will be shared in real-time.

  To stop sharing audio with a Desktop or App Window share, click the speaker icon after the connected display name to appear with a red slash (off). If you are sharing desktop audio on a Mac, you may need to take additional setup steps to enable it. See [Enable Audio for Desktop Sharing on macOS](#) for more information.

- **App Window**: Share a real-time view of only the selected application window to the display. This sharing option allows you to maintain privacy by only sharing a single application instead of everything on your desktop.

- **Media File**: Share media files such as images and videos saved locally on your laptop device to the display. Solstice supports image and video files up to 4K resolution.

  Solstice supports sharing a broad range of video types, but not all video files are supported. If a video file is not supported, you can use the Desktop sharing option to stream the video to the display.

When sharing your desktop, the Mersive Solstice app window will be hidden by default. Click **Sharing Desktop** at the top of your screen to show it again. You can also click **Stop Sharing** to quickly stop sharing your desktop.

If the text options described above (e.g., Share, Settings) don’t appear in the left navbar of the Mersive Solstice laptop app, icon-only navigation may be enabled. Click the Solstice logo in the upper left of the app window to turn navigation text back on.

How to Share Content Using the Mersive Solstice App on a Mobile Device

On the Share tab of the Mersive Solstice mobile app, you can wirelessly share an unlimited amount of content to the Solstice display using the following options. Note that the content shared to Solstice will never leave your device, only pixels will be streamed to the display.
- **Mirror Screen**: Share a real-time view of your mobile device screen. Tap the speaker icon after the connected Solstice display name to capture audio along with screen mirroring.

  Some Android apps may block audio capture, preventing the streaming of their audio to Solstice.

- **Media File**: Share media files such as images and videos from your mobile device's media library.
- **Camera**: Take a picture with your mobile device and share it to the display.
- **Take Video**: Take a video with your mobile device and share it to the display.

To share media files, pictures, and videos, be sure to grant permissions for the Mersive Solstice app to access your mobile device's media files, camera, and microphone.

**How to Find Help in the Mersive Solstice App**

In-app resources to help users get the most out of their Solstice experience are available in recent version of the Mersive Solstice app on Windows and macOS:

- **Contextual help** can be opened by clicking the help (question mark) icon in the upper right of the app window. A pop-out window appears with hints about what can be done from that area of the app. This information changes to match your location as you move to different sections in the navbar.

  Click the X to close the window, or follow the Need more help? link for more information about the topic.

- **Help articles** about the most common tasks in the Mersive Solstice app can be found by going to Help (question mark icon) in the left navbar, or following a link from the contextual help window.
Most articles contain animated examples that show simple demonstrations of the tasks being described. Animations can be paused and resumed as needed.

Click Learn more at the end of an article to find more in-depth documentation on the topic.

**How to End Your Meeting and Disconnect from Solstice**

When you are ready to finish your collaboration session, disconnect from Solstice. There are a number of ways to disconnect from a Solstice display:

**To disconnect Solstice room camera and mic resources from a video conference, but continue in-room Solstice wireless content sharing and collaboration (Windows and macOS):**

- From Room Camera + Mic in the left navbar, click to turn the Room Camera and Mic toggle off (gray).

**To disconnect from Solstice completely, including from in-room wireless content sharing and room camera and mic resources plugged into the Solstice Pod, you can do one of the following:**

- Click Disconnect in the top right of the Mersive Solstice app window. You will be prompted to confirm that you want to disconnect from the display.
- Close the Mersive Solstice app window:
  - On a laptop, click the X in the upper right corner to close the main Mersive Solstice app window. You will be asked if you wish to disconnect from the display and stop sharing all content. Click Disconnect.
  - On a mobile device, close the app window and Solstice will automatically disconnect the device from the display.

When using Solstice with a video conference, remember to also end your video conference in your conferencing app.
Other Ways to Share to Solstice

Solstice supports multiple app-free sharing options so that users can share their device screen to the Solstice display without needing to install the Mersive Solstice app. This enables guest and occasional users to quickly share content in a Solstice room. Solstice supports app-free sharing using AirPlay, Miracast, browser-based sharing, or a standard HDMI connection.

Or download the 1-page App-Free Sharing to Solstice guide for a quick in-room reference.

How to Mirror Your iOS Device Screen Using AirPlay

Solstice supports full mirroring of iOS 7+ devices (Apple iPhones and iPads) that feature Apple's AirPlay functionality. AirPlay mirroring is accomplished through the device’s native AirPlay feature, using a similar process as connecting to an Apple TV.

If you are unable to mirror your iOS device using AirPlay, contact your IT administrator to see if AirPlay mirroring is enabled for the Solstice display.

1. Ensure the iOS device is connected to the WiFi network used to connect to the Solstice display.
2. Open the iOS Control Center:
   - On an iPhone X or later, or an iPad with iPadOS 13 or later, swipe down from the upper-right corner of the screen.
   - On an iPhone 8 or earlier or iOS 11 or earlier, swipe up from the bottom of the screen.
3. Tap the Screen Mirroring icon and select the Solstice display from the list that appears. If the desired Solstice display does not appear in the AirPlay menu of your device, open the Mersive Solstice app and connect to the desired display, then repeat steps 2 and 3.
4. If prompted for an AirPlay code, enter the 4-digit screen key visible on the Solstice display. Your device will connect wirelessly to the display and your screen will be streamed in real-time.
5. To stop mirroring your screen to the display:
   a. Open the iOS Control Center again.
   b. Tap the Screen Mirroring icon for the connected Pod.
   c. Tap Stop Mirroring.

An AirPlay option may also appear when viewing photos or videos in iOS. Photos and videos shared via AirPlay generally appear full screen on the Solstice display.
**How to Mirror Your macOS Device Screen Using AirPlay**

If your organization has enabled streaming with AirPlay, users without the Mersive Solstice app can connect and share their screen to the display using AirPlay capabilities on macOS devices (High Sierra and later). AirPlay mirroring is accomplished through a device’s native AirPlay feature, using a process similar to connecting to an Apple TV.

If you cannot select the Solstice display to mirror your macOS device using AirPlay, contact your IT administrator to make sure that AirPlay mirroring is enabled for the Solstice display.

1. Connect the macOS device to the WiFi network shown on the Solstice display.
2. From the top menu bar, either select the **AirPlay** icon or open the Control Panel from the top bar and select **Screen Mirroring**. Then select the desired Solstice display.
3. If prompted for an AirPlay code, enter the 4-digit screen key visible on the Solstice display. Your device will connect wirelessly to the display and your screen will be streamed in real-time.
4. To stop mirroring your screen to the display, select either the **AirPlay** icon or **Control Panel > Screen Mirroring** from the menu bar. This will show the active AirPlay connection. Select the name of the Solstice display to disconnect.

**How to Mirror Your Windows Device Screen Using Miracast**

Users without the Mersive Solstice app can connect and share their screen to the display using Miracast capabilities on their Windows device. If you are unable to select the Solstice display, contact your IT administrator to make sure that Miracast is enabled for that display.

1. Connect the Windows device to the WiFi network shown on the Solstice display.
2. On a Windows laptop, use **Windows key + K** or click the **Connect** button in the Windows notification center (found on the far right end of taskbar) to open the Connect pane.
3. From the list of wireless displays available, select the Solstice display. If you do not see it in the list of available displays, make sure you have scrolled through the whole list.

   **Warning:** Turning Miracast WiFi Direct off and back on in quick succession for a Solstice Pod may result in it temporarily appearing multiple times in the Windows Connect and Wi-Fi connection panels. To resolve this issue, refresh the list of available Miracast WFD devices by turning Wi-Fi off and back on for affected Windows devices.

4. If prompted for a PIN, enter the screen key from the display. Your device will connect wirelessly to the display and your screen will be streamed in real-time.
5. To stop Miracast streaming to the display, open the Connect pane and click **Disconnect**.
How to Mirror Your Android Device Screen Using Miracast

Users with a Miracast app on their Android mobile device can connect and mirror their screen to Solstice. If the Solstice display does not appear as an option to Miracast to, contact your IT administrator to make sure Miracast is enabled for that display.

1. Connect the Android device to the WiFi network shown on the Solstice display.
2. Swipe down twice from the top of the Android screen to open the Quick Settings menu.
3. Select your Miracast screen casting or mirroring option.
   
   Different device manufacturers have developed different Miracast options. Some possibilities are SmartView (Samsung) or Wireless Projection (Huawei).
4. From the list of Miracast devices available, select the name of the Solstice display.
5. If prompted for a PIN or password, enter the screen key shown on the display. Your device will connect wirelessly to the display and your screen will be mirrored in real-time.

How to Share Your Desktop via HDMI

Gen3 Solstice Pods offer the option for users to use an HDMI cable to connect a laptop directly to the HDMI-in port on the front of the Pod. This allows users to share a wired content source to the display. The wired desktop share will appear in the collaboration session like any other post, and can be controlled by users in the session with the Mersive Solstice app.
Use Solstice with Your Video Conference

These instructions outline steps for meeting hosts to connect their video conference to the Solstice sharing space and room peripherals connected to the Solstice Pod. This capability is only available for Solstice Pods that have Solstice Conference enabled.

You will need to ensure that you have the latest version of the Mersive Solstice app for Windows or macOS and have installed the Solstice Conference drivers. (If not, install them from the Room Camera + Mic tab.) Note that installing Solstice Conference drivers requires elevated permissions. If you do not have elevated permissions, contact your IT administrator for assistance.

Supported Operating Systems for Meeting Host Laptops

Solstice Conference drivers are supported on laptop devices that meet the following requirements.

The ability to connect Solstice to a video conference is not supported on mobile devices. However, in-room users can share content to the Solstice display using either laptops or mobile devices.

Solstice Conferencing on Windows

## Supported Conferencing Services

The table below lists the video conferencing (VTC) services Mersive recommends, which are regularly tested on Windows and macOS devices. Full support indicates Mersive has validated the VTC experience with Solstice functionality in the dedicated video conferencing service app. In some cases, the browser-based version of a video conferencing service may offer better functionality. For best results:

- Check that your video conferencing app is updated to the latest version.
- Avoid running video conferences with Solstice in power savings or low power mode. If possible, the meeting host laptop should be plugged in to external power and running in a high performance mode.
- Don't run video conferences as virtual applications and/or in a VDI (virtual desktop infrastructure). This can cause unpredictable results and is not supported by Mersive.
- If using a 4K laptop, scale screen resolution down to 1080p when connecting to a video conference with Solstice.

If your preferred video conference service is not listed:

1. **Try your preferred video conferencing app.**
   
   Many other video conferencing app versions have been found to work with various versions of Solstice.

2. **Try the browser-based version of your preferred video conferencing service.**
   
   Using the web-based version of a video conferencing service (such as teams.microsoft.com) sometimes avoids issues with sharing and connecting to Solstice room devices experienced in downloaded Windows or macOS apps. Past testing has found this for versions of Microsoft Teams, WebEx, Blue Jeans, Chime, RingCentral, and Slack, particularly on macOS.

   **Supported web browsers for browser-based video conferencing services are Chrome, Firefox, Microsoft Edge, and Safari.**

   **In some browser-based video conferencing services, the Solstice display may be labeled as the Solstice Pod name.**

---

**CPU Priority Management for Video Conferences with Solstice**

Starting in Solstice 5.5.2, The Mersive Solstice app on Windows can manage CPU priority of the app to improve the performance of Solstice-enabled video conferences on lower-end machines. Such machines may previously have experienced audio, video, and other issues, particularly when other applications were running.

When a laptop is detected to be lower-end for the purpose of Solstice-enabled video conferences, and the Performance Optimization setting is enabled:

- The Mersive Solstice app for Windows will change the priority of the Mersive Solstice Conference process from Normal to High to improve performance.

- If the laptop is unplugged and battery levels drop below 25%, the app will change the priority of the Mersive Solstice Conference process back to Normal to preserve battery power. If the computer is plugged in and has at least 5% battery, it will switch back to High priority.
Definitions of lower-end Windows machines for the purposes of Solstice-enabled video conferences will be updated over time.

**Start a Video Conference with Solstice Sharing and Room Resources**

1. Launch the Mersive Solstice app on your laptop.
2. Start the connection to Solstice by selecting the Solstice display in your meeting space. Displays that can be used for a Solstice-enhanced video conference are marked with a camera icon.
3. If the Solstice display has a screen key enabled, a screen key entry box will appear:

![Screen Key Entry Box](image)

   a. Enter the 4-digit screen key to connect to Solstice for wireless in-room content sharing and collaboration.

   b. If you are hosting a hybrid meeting with remote participants joining via video conference, also toggle on **Connect to room camera and mic**. This will make room devices connected to Solstice available to the video conferencing app and allow the Solstice collaboration space to be shared in the video conference.

   If you do not see this feature, or it appears disabled, contact your organization's Solstice administrator for assistance.

   c. Click **Connect** to start Solstice content sharing and, if selected, Solstice video conferencing resources.

4. If the Solstice display does not require a screen key, you will be immediately connected to Solstice for wireless content sharing only.
5. Select Room Camera + Mic in the left navigation bar. From here you can connect to Solstice video conferencing resources after connecting to the Solstice display, see upcoming meetings on your integrated Microsoft 365 calendar, and view resources available to a video conference. (This panel was previously the Conference panel in older app versions and has been updated for clarity and simplicity.)

   a. If there is an upcoming video conference meeting scheduled in your integrated Microsoft 365 calendar, it will appear on the left side of this panel. Click the Launch meeting button to start Solstice video conferencing resources (if needed) and start the video conference from the link in the body of the meeting invite.

   b. If no upcoming video conference is shown, make sure Room Camera and Mic is toggled on (blue) to connect to Solstice video conferencing resources. Then start your video call in your video conferencing application.

6. Once you are connected to the Solstice display and the Room Camera and Mic toggle is on, resources available to a video conferencing appear on the right side of the Room Camera + Mic panel.

   a. See the Select these devices list for available room devices, such as cameras and microphones, plugged into the Solstice Pod. Devices listed here are wirelessly connected to your laptop and can be selected as video and audio sources in your video conferencing application.

   b. Look under Share the following to see the name of the window, usually Screen 2 or Monitor 2, to share to your video conference so remote attendees can see content shared in-room to the Solstice display.
Mersive strongly recommends not having additional monitors connected to your laptop while hosting a video conference with Solstice.

If the Room Camera + Mic option in the left navbar shows green, Solstice video conference resources are currently available in your video conferencing app.

7. Once your video conference has been started, you can select available camera, microphone, and speaker devices as audio and video resources and share the Solstice display (Screen 2 or Monitor 2) in the video conferencing app.

8. After you have ended your video call and exited the video conferencing app, use one of the options in the End Your Meeting section below to disconnect from the Solstice video conference resources and/or from in-room Solstice content sharing.

Mersive recommends the version of the Mersive Solstice app always match the software version of the Solstice Pod. Some versions of the Mersive Solstice app may require the versions to match exactly to connect Solstice resources to a video conference.

End Your Meeting and Disconnect from Solstice

As the host, when your meeting is finished you will need to end your video conference and disconnect from Solstice. Below are some ways you can disconnect from Solstice.

To disconnect Solstice room camera and mic resources from a video conference, but continue in-room Solstice wireless content sharing and collaboration (Windows and macOS):

- From Room Camera + Mic in the left navbar, click to turn the Room Camera and Mic toggle off (gray).

To disconnect from Solstice completely, including from in-room wireless content sharing and room camera and mic resources plugged into the Solstice Pod, you can do one of the following:

- Click Disconnect in the top right of the Mersive Solstice app window. You will be prompted to confirm that you want to disconnect from the display.

- Close the Mersive Solstice app window:
  - On a laptop, click the X in the upper right corner to close the main Mersive Solstice app window. You will be asked if you wish to disconnect from the display and stop sharing all content. Click Disconnect.
- On a mobile device, close the app window and Solstice will automatically disconnect the device from the display.

When using Solstice with a video conference, remember to also end your video conference in your conferencing app.

FAQ

Why can't I minimize or close my Mersive Solstice app window?

Your Mersive Solstice app might be docked to your system tray. To remove this setting and regain controls for the app window, right click the Solstice icon in your system tray and deselect Dock to system tray.

I'm hosting a meeting, and Solstice keeps reminding me that I'm sharing a post to a display. How can I turn this off?

To limit Solstice notifications, open your Solstice desktop app, then go to Settings. Under General > Notifications, select either None or Critical, depending on your notification preferences.

Notification settings also control notifications for Solstice Conference drivers. Selecting None will turn off performance and compatibility notifications related to using Solstice resources for a video conference.

Why does the Solstice display show as Screen 3 in my video conferencing application?

This may be the case if your laptop is configured to have additional virtual desktops. Mersive strongly advises against using additional virtual desktops alongside Solstice Conference.

Why am I seeing a mirroring effect when I use Solstice Conference on a Mac laptop?

On macOS, a "hall of mirrors" visual effect may appear when using Solstice Conference if the Conference drivers are not loading correctly. Open Security & Privacy settings and check the make sure you have allowed drivers from Mersive.

Why is the Solstice user app failing to share my desktop and app windows on my Windows laptop with dual graphics cards?

In the Mersive Solstice app on Windows laptops with dual graphics cards, an issue has been reported
that manually setting the dedicated graphics card as primary can prevent the app from successfully sharing the user’s Desktop and App Windows. In this case, a sharing error may appear in the Mersive Solstice app; Media File sharing may still be successful. This issue can usually be resolved by changing the Windows and/or graphics card settings to allow the graphics processor to be automatically selected.

**Why does my Pod with digital signage enabled spontaneously reboot after a Solstice video conference?**

For Solstice Pods running digital signage feeds that are also used regularly for Solstice-enabled video conferences, a known issue exists that occasionally causes Solstice to become unstable and the Pod to spontaneously reboot. Mersive recommends that Pods experiencing this issue be configured to perform a daily reboot, which should avoid spontaneous restarts. A Solstice admin can enable Daily Reboots in the Solstice Cloud > Advanced settings.
Control Shared Content on the Solstice Display

There are multiple ways to control content shared to a Solstice display and how it appears on the display in the Layout tab of the Mersive Solstice app. Any user connected to the session can control the content layout.

All the controls described below can also be performed on HID-compliant touch displays using equivalent touch gestures.

Watch a video to learn how to enable Solstice agnostic conferencing support to share your Solstice collaboration session with your preferred video conferencing service.

- Click the Share button to quickly share your desktop, an app window, or a media file from your laptop.
- Drag and drop posts to change the order of the content, or to hide/display content by moving it into and out of the dock panel on the left side of the display.
- Click-and-hold or right-click on a post to view options to make the post full screen, view post details, or delete the post.
- Click a participant icon to access the participant menu. This menu gives you options to show, hide, stack, or delete the participant's posts, as well as disconnect the participant from the collaboration session.
- Click the vertical ellipsis icon to view the media placement menu. This menu allows you to align posts to a grid and quickly move all posts on or off the screen.
- You can also click-and-hold or right-click on a post to create a stack, which acts as a virtual folder. Right-click or click-and-hold a stack for options to unstack the posts or edit which posts are in the stack. Or use the participant menu to stack all of a user's posts.
- Pinch to zoom posts on touch-enabled devices.
- Control videos posted to the display with the Solstice video player. The Solstice video player functions similarly to other video players, with play/pause buttons, volume control, and loop options. To view the video player controls, click the camera icon in the lower right corner of the video post.
If you have a USB mouse connected to the Solstice Pod or host laptop, or if you have a touch-screen display, you can interact with the display interface directly to control content.
Solstice Ink

Available in the mobile version of the Mersive Solstice app for iOS, Solstice Ink allows users to highlight and temporarily mark up content on the Solstice display from anywhere in the room by simply pointing and drawing with their smartphones. This feature is also supported in moderator mode, but it is not supported on tablets.

Ink has three modes of use:

- **Pointer**: By default when you select Ink from the mobile app’s menu bar, your mobile device will be in pointer mode. Simply move your device to move the pointer on the Solstice display.

- **Ping**: Tap the Ping button to pulse the pointer. Slide your finger from the button toward the center red dot for a continuous pulse. Tap Ping again to stop continuous pulse.

- **Temporary mark-up**: Press and hold the Draw button to draw a mark, such as a circle, on the Solstice display. Release the Draw button once you are done. Solstice will smooth out your mark after you have finishing drawing it, and the mark will fade away after a short amount of time.

In Ink, swipe left and right to move between Draw and Ping mode. To exit Ink, simply tap another option in the bottom menu bar of the app.
Moderate a Solstice Session

Moderator mode allows a meeting host to approve requests from collaborators to join the session or post content to the display. Once moderator mode is enabled, a session moderator must approve future requests for users to join the meeting or for new content to be posted, and only a moderator can control content layout.

How to Moderate a Session in Solstice Desktop App

1. Open the Mersive Solstice app and connect to a Solstice display to start a collaboration session.
2. Select **Moderate** in the left navbar of the app.
3. Switch the **Moderate Meeting** toggle to on (blue).
4. When a new collaborator attempts to connect to the display, an alert will appear in the sidebar. Click **Alerts** to view the request. The moderator may choose one of three options:
   - **Deny** the connection: The collaborator will be notified that their connection attempt was canceled by the moderator.
   - **Approve** the connection: The collaborator will be connected to the display.
   - **Approve as Moderator**: The collaborator will join with full moderator rights to approve and reject requests to join and post content.
5. When a collaborator posts content to the display, an alert will again appear in the **Alerts** section of the sidebar. Two options display for a post request:
   - **Reject**: The post will not appear on the display. Rejecting the request will not alert the user that their post has been rejected.
   - **Approve**: The post will appear on the display.
6. To manage participants’ posts, select **Layout** from the sidebar. Right-click a participant’s icon at the bottom of the layout window for options including showing all posts, hiding all posts, stacking posts, and deleting all posts for the selected participant.
7. To exit moderator mode, go to **Moderate** in the sidebar and switch the **Moderate Meeting** toggle to off (gray).

How to Moderate a Session in Solstice Mobile App

1. Open the Mersive Solstice mobile app and connect to a Solstice display to start a collaboration session.
2. Select **Meeting** from the bottom navbar.
3. Switch the **Moderate Meeting** toggle to on (blue).
4. When a new collaborator attempts to connect to the display, an alert will appear in the navbar. Tap **Meeting** to view the request. The moderator may choose one of three options:
• **Deny** the connection: The collaborator will be notified that their connection attempt was canceled by the moderator.

• **Approve** the connection: The collaborator will be connected to the display.

• **Approve as Moderator**: The collaborator will join with full moderator rights to approve and reject requests to join and post content.

5. When a collaborator posts media content to the display, an alert will again appear in the **Meeting** section of the navigation bar. Two options display for a post request:

   • **Reject**: The post will not appear on the display. Rejecting the request will not alert the user that their post has been rejected.

   • **Approve**: The post will appear on the display.

6. To manage participants’ posts, select **Layout** from the navigation bar. An icon appears for each participant at the bottom of the layout window. Tap a participant’s icon for options including showing all posts, hiding all posts, stacking posts, and deleting all posts for the selected participant.

7. To exit moderator mode, go to **Meeting** in the bottom navbar and switch the **Moderate Meeting** toggle to off (gray).
View a Collaboration Session Remotely

For participants who are not in the same room as the Solstice display, Solstice currently provides an option to “look in” to the meeting via a web browser. When Browser Look-In functionality has been enabled for a Solstice display, there are two ways to access it: in the Mersive Solstice app or via a web browser.

The Remote Look-In view is not instantaneous – it updates about every 5 seconds. Depending on your organization’s security policies, you may not have access to this feature.

How to View a Collaboration Session Remotely

With the Mersive Solstice App:

1. Open the Mersive Solstice app and connect to a Solstice display.
2. Click Moderate, then select the Remote View tab.

3. Click the Browser Look-in link provided and enter the screen key shown on the Solstice display if prompted. A view of the Solstice display will open in your default web browser, allowing you to view content shared to the display in a Solstice-enabled meeting.

Without the Solstice App:

1. Or open your web browser directly.
2. Enter the URL or IP address shown in the top-right or bottom-left corner of the Solstice display.
The Solstice Quick Connect page will open.

3. In the bottom-right corner, click **Browser Look-in**. If asked, enter the screen key shown on the Solstice display.

   A view of the Solstice display will open in your browser, allowing you to view the content being shared to Solstice during a meeting.
